

AIM: Implement a Circular Queue and perform the Queue operations: Enqueue, Dequeue and Print using Menu Driver Program such as 1.Add, 2.Delete and 3.Print and 4.Exit.

PROGRAM:

```
#include <stdio.h>
```

```
// Creating array Globaly
```

```
int Queue[5];
```

```
int front = -1, rear = -1, data;
```

```
// FUNCTION FOR ENQUEUE
```

```
int enqueue()
```

```
{
```

```
    if((rear + 1) % 5 == front){
```

```
        printf("The Queue is Overflow.\n");
```

```
    }else if(front == -1 && rear == -1){
```

```
        front = 0;
```

```
        rear = 0;
```

```
        printf("Enter the data.\n");
```

```
        scanf("%d", &data);
```

```
        Queue[rear] = data;
```

```
    }else{
```

```
        printf("Enter the data.\n");
```

```
        scanf("%d", &data);
```

```
        rear = (rear + 1) % 5;
```

```
        Queue[rear] = data;
```

```
    }
```

```
    return 0;
```

```
}
```

```
// FUNCTION FOR DEQUEUE
```

```
int dequeue()
```

```

{

    if(front == -1 && rear == -1 ){
        printf("The Queue is Underflow.\n");
    }else if(front == rear){
        printf("The Queue is Underflow.\n");
        front = rear = -1;
    }else{
        printf("The deleting element is %d.\n", Queue[front]);
        front = (front + 1) % 5;
    }
    return 0;
}

void display()
{
    if (front == -1)
    {
        // Checking the queue is empty or not.
        printf("The Queue is empty so, can not print the element.\n");
    }
    else
    {
        // printing the elements in the Queue
        int i = front;
        while (1)
        {
            printf("%d\t", Queue[i]);
            if (i == rear)
                break;    // Stop when we reach the rear
            i = (i + 1) % 5; // Move to the next index in circular manner
        }
    }
}

```

```
    }  
    printf("\n");  
}  
}  
  
// MAIN FUNCTION  
int main()  
{  
    int choice;  
    printf("Queue Implementation\n");  
    printf("Choices\n1.Enqueue\t2.Dequeue\t3.Print\t4.Exit\n");  
    do  
    {  
        printf("Enter a valid choice\n");  
        scanf("%d", &choice);  
  
        switch (choice)  
        {  
            case 1:  
                enqueue();  
                break;  
            case 2:  
                dequeue();  
                break;  
  
            case 3:  
                display();  
                break;  
  
            case 4:  
                printf("You exited the Program successfully.");  
                break;  
        }  
    }  
}
```

```

        break;

    default:

        printf("Please enter a valid choice as mention!\n");

        break;

    }

} while (choice != 4);

return 0;

}

```
